

RenewEn USA

Lighting up a cleaner America

R*enewEn* is a non-profit organization that produces secure, green and affordable energy today, to meet the world's growing demand for energy tomorrow. Wind produced energy is just that a type of energy that does not create harmful greenhouse gases, like carbon dioxide and methane gas in its operation. Due to technological advances the cost to produce wind power has decreased by 80% in the last 15 years making it a better source of energy.

Wind power is abundant, renewable, clean and growing in its use at a rate of 38% a year. It is even growing at a faster rate than other forms of clean energy that *RenewEn* produces like solar power, hydro power and ethanol fuel. These alternative forms of energy are major contributions that help us to reduce our dependency on harmful fossil fuels.

This is allowing us to create a brighter future for our generation and many generations to come.
