

Renewable Energy Made Simple

WHAT IS RENEWABLE ENERGY?

Renewable energy comes from sources that are essentially limitless. Some sources of renewable energy include the sun, flowing water and the heat of the earth. In addition to being plentiful in supply, many forms of renewable energy yield zero greenhouse gasses, and therefore hold promise not only for our energy future but also for preserving the climate.

OUR COMMITMENT

We're all looking for ways to protect the environment for future generations, but it's not always clear what each of us can do to help. That's why we're excited to tell you about the new way to support a green homegrown source of electricity AND help our environment: RENEWEN WIND energy.

Now RENEW EN customers can invest in the future by choosing electricity from a virtually untapped energy source—Wind Energy.

In the near future, through progressive investment in tested and reliable renewable energy solutions, Renew En aims to reduce its use of fossil fuels as well as the greenhouse gasses that generating energy from them produces, all while keeping energy affordable and dependable for our customers.
